(a) The two axes are not the same question
at matched high confidence, 6.3× the miss rate
BLIND SPOT
sure, no evidence
23.6%
missed n = 2,391
trusted
sure, well seen
3.7%
missed n = 4,459
unknown space
unsure, no evidence
39.8%
missed n = 2,989
model error
unsure, well seen
26.7%
missed n = 951
high
low
confidence (MSP)
"is my prediction reliable?"
low
high
observability O_{GT} "was there evidence?"
(b) and neither wins everywhere
car (22,096)
truck (3,956)
motorcycle (1,011)
