
(a) mask_camera: binary, no occlusion
x (m)
y (m)
(b) $O(v;\mathcal{G})$: continuous, occlusion-aware
(c) support, 60 sealed-test frames
$O(v;\mathcal{G})$
mask_camera
fraction of voxels (log)
value
(d) inside mask_camera = 1, error still varies with O
3 reversals
per-voxel error rate
$O(v;\mathcal{G})$ decile
